

Crabgrass Preventer Plus 19-0-3 Fertilizer with 30% UMAXX™ Contains .125% Dimension™ for crabgrass control.

- Dimension™ provides pre-emergent and post-emergent control of crabgrasses, weedy grasses, and broadleaf weeds early in their growth cycle.
- UMAXX™ stabilized nitrogen “spoon feeds” the turf for up to 16 weeks
- No stress—steady growth
- Do not plant new seed for 10-12 weeks
- Apply at 4# per 1,000 square feet of lawn

Endure

A 50lb. bag treats 12,500 square feet on turfgrass.

A 20 lb. bag treats 5,000 square feet on turfgrass.

*Endure uses a uniform particle size for improved spread pattern and coverage. Uniform coverage provides even green color and more effective herbicide control. Turfgrass needs fed every six to eight weeks during the growing season.

*All phosphates have been removed from the Endure maintenance products keeping our environmental concerns in mind. Newly seeded turf should be fertilized with Endure 10-20-8 Starter Plus Earth-Friendly Organics at the time of planting. 10-20-8 Starter Plus can be used anytime a soil test result recommends additional phosphate to improve soil conditions.
